39-gene WGCNA intersection GO_BP dotplot
negative regulation of molecular function
negative regulation of cell development
immunoglobulin mediated immune response
B cell mediated immunity
positive regulation of canonical NF-kappaB signal transduction
negative regulation of DNA-binding transcription factor activity
humoral immune response mediated by circulating immunoglobulin
positive regulation of extrinsic apoptotic signaling pathway
positive regulation of type II interferon production
regulation of Notch signaling pathway
lymph node development
regulation of lipase activity
regulation of chronic inflammatory response
positive regulation of alpha-beta T cell proliferation
hematopoietic or lymphoid organ development
