39-gene WGCNA intersection GO_MF b
molecular function regulator activity
signaling receptor activator activity
receptor ligand activity
cytokine activity
cytokine receptor binding
tumor necrosis factor receptor superfamily binding
tumor necrosis factor receptor binding
protein homodimerization activity
protein dimerization activity
SH3 domain binding
oligosaccharide binding
metalloendopeptidase activity involved in amyloid precursor protein catabolic process
hydrolase activity, acting on ester bonds
hyaluronic acid binding
cysteine-type endopeptidase inhibitor activity
