39-gene WGCNA intersection GO_MF emapplot
hydrolase activity, acting on ester bonds
hyaluronic acid binding
SH3 domain binding
cysteine-type endopeptidase inhibitor activity
metalloendopeptidase activity involved in amyloid precursor protein catabolic process
cytokine activity
cytokine receptor binding
molecular function regulator activity
tumor necrosis factor receptor binding
protein dimerization activity
tumor necrosis factor receptor superfamily binding
signaling receptor activator activity
oligosaccharide binding
receptor ligand activity
protein homodimerization activity
