46 Matrisome DEGs GO_MF dotplot
molecular function regulator activity
signaling receptor regulator activity
cytokine activity
cytokine receptor binding
molecular function inhibitor activity
tumor necrosis factor receptor binding
tumor necrosis factor receptor superfamily binding
protein homodimerization activity
protein dimerization activity
hydrolase activity, acting on ester bonds
metalloendopeptidase activity involved in amyloid precursor protein catabolic process
hyaluronic acid binding
SH3 domain binding
cysteine-type endopeptidase inhibitor activity
oligosaccharide binding
