

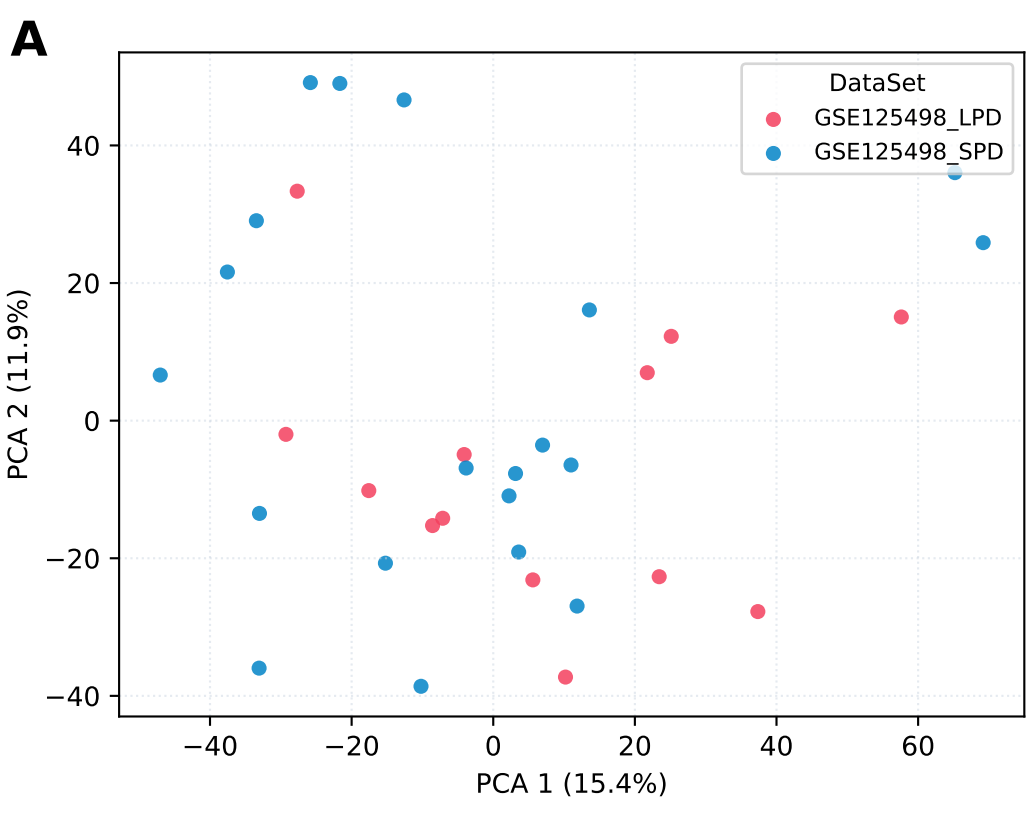

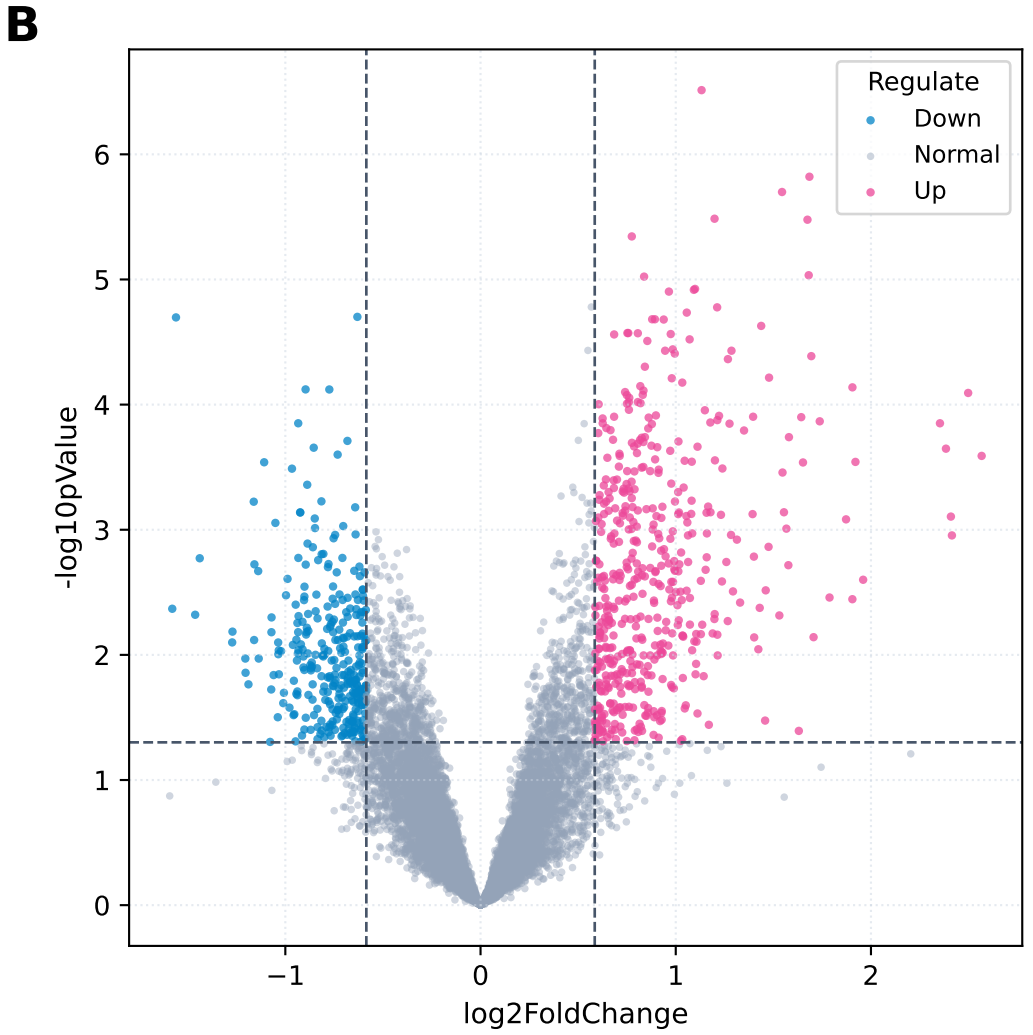

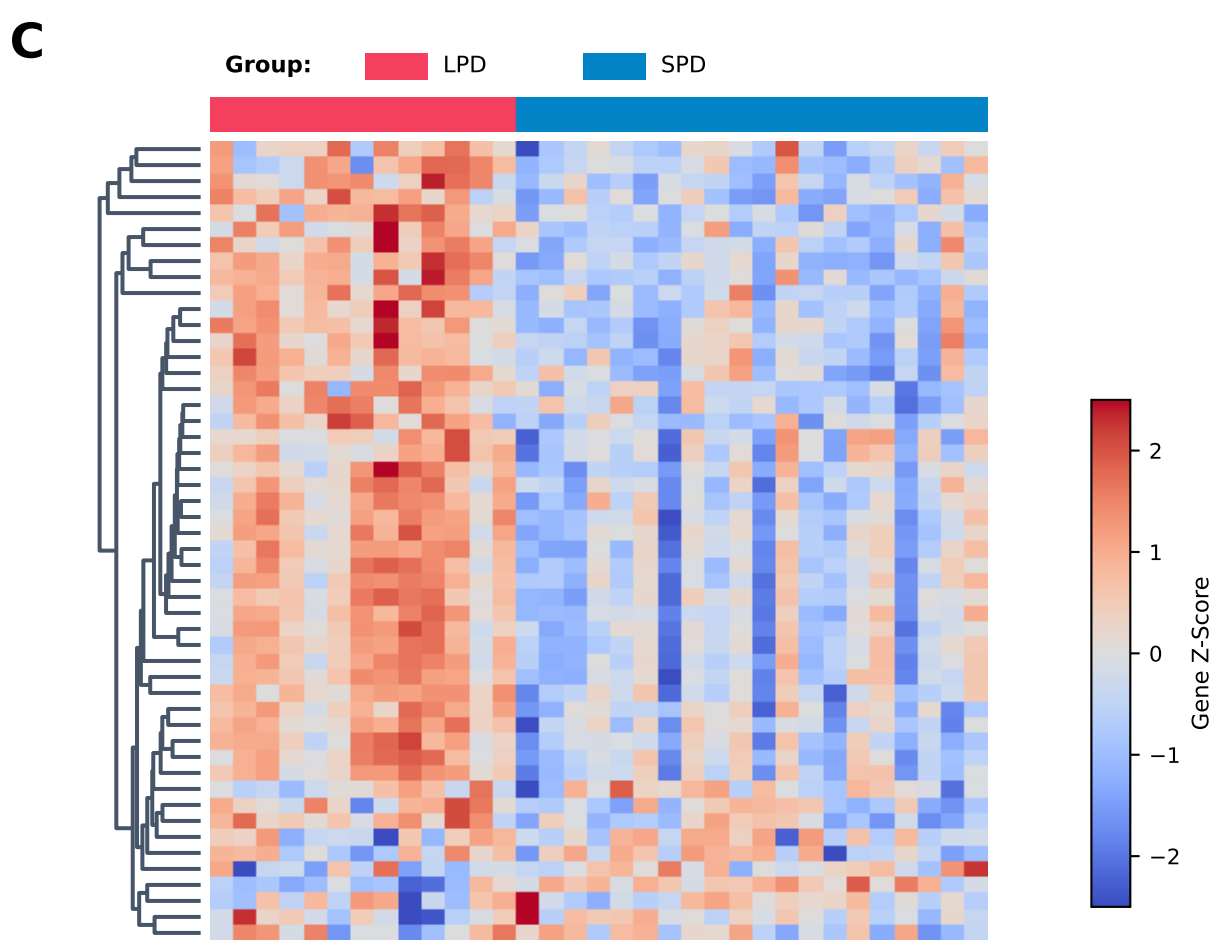

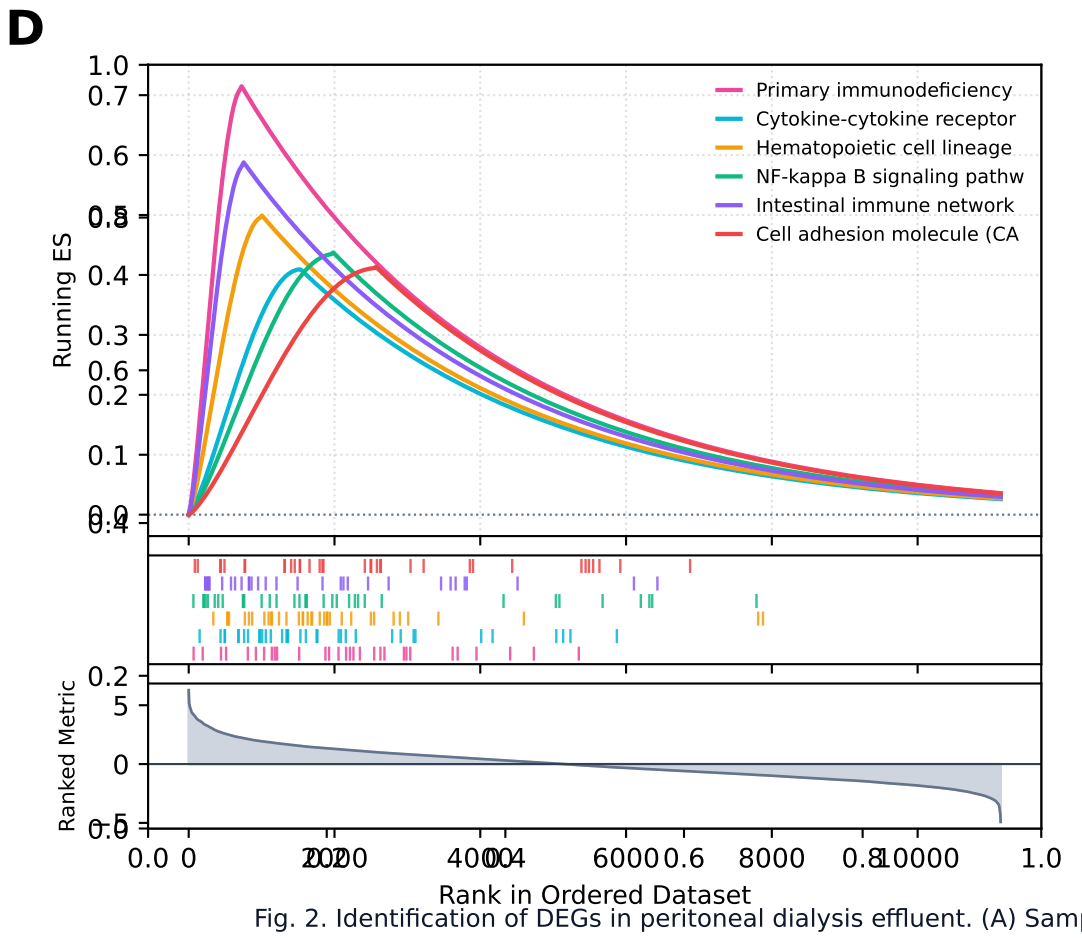

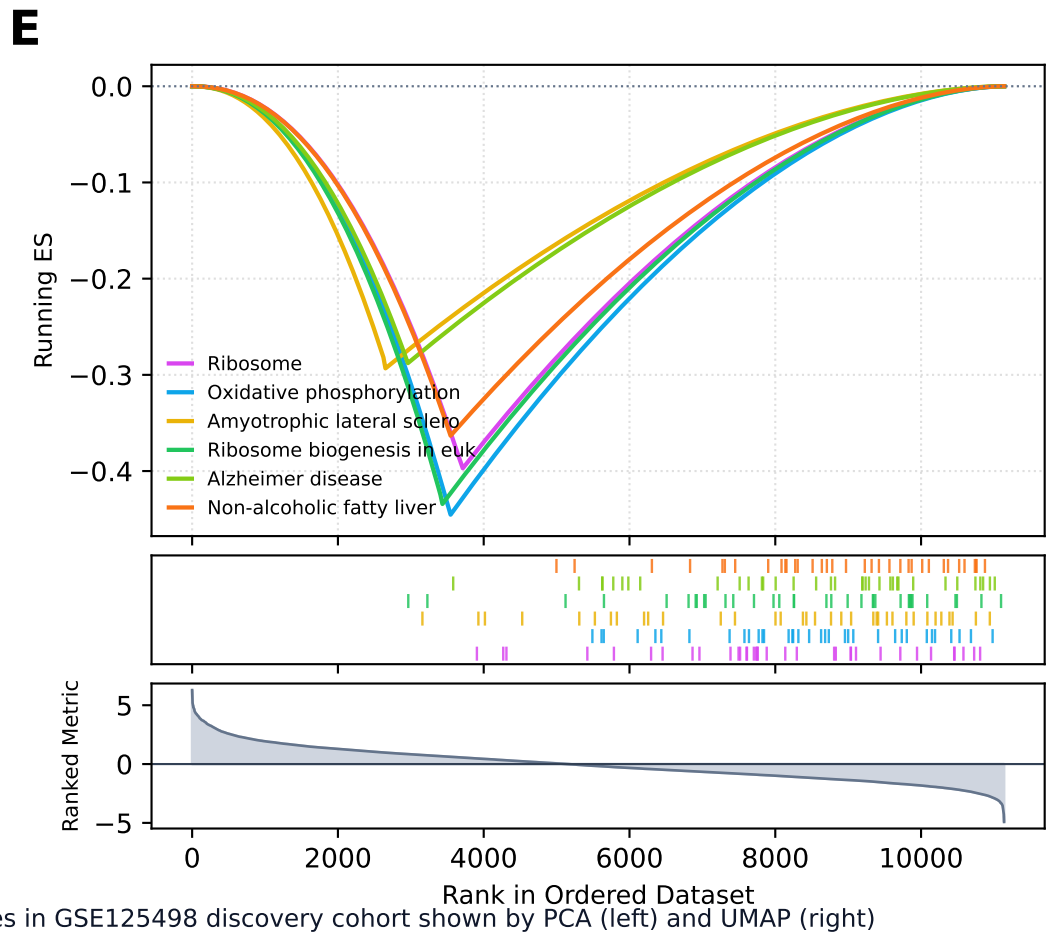

Fig. 2. Identification of DEGs in peritoneal dialysis effluent. (A) Samples in GSE125498 discovery cohort shown by PCA (left) and UMAP (right) without cross-cohort merging. (B) Volcano map of DEGs. Pink and blue represent upregulated and downregulated genes, respectively (nominal P < 0.05, |log2FC| >= 0.585). (C) Heatmap of Top 50 DEGs with sample group annotation. Upregulated (D) and downregulated (E) KEGG pathways identified by GSEA.
