

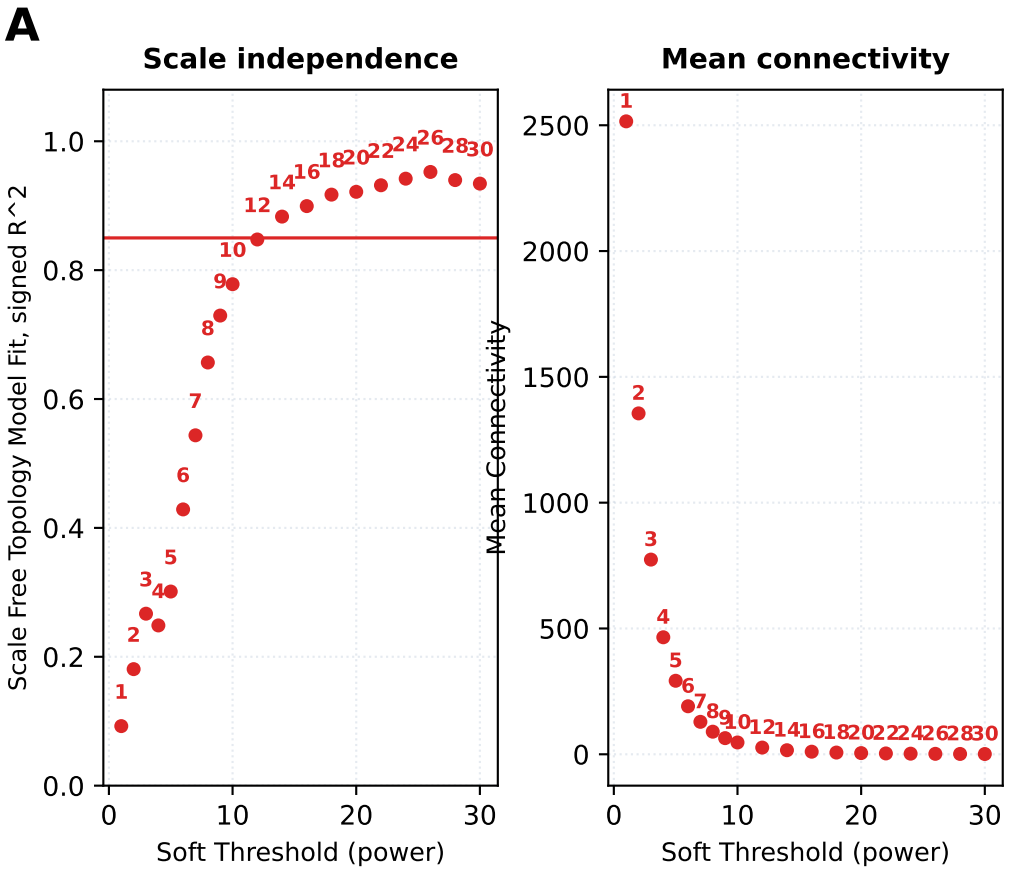

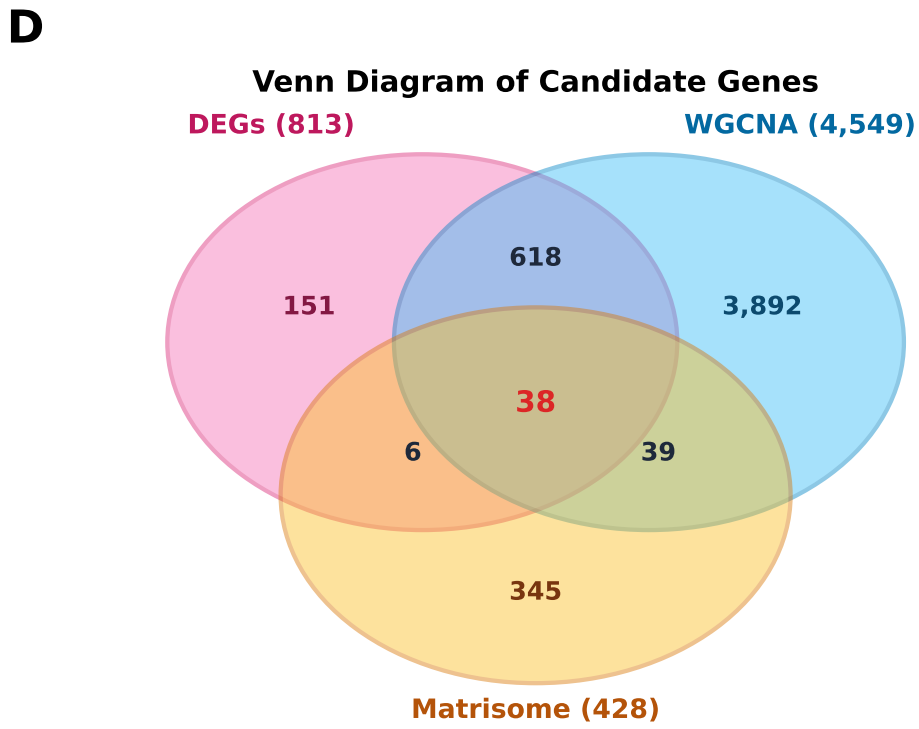

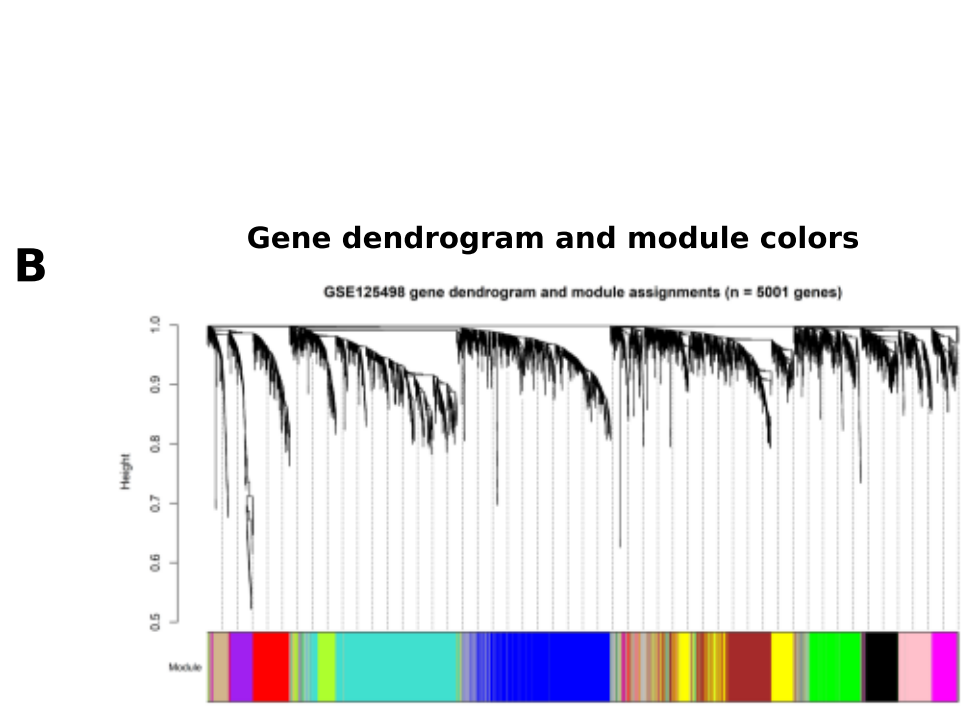

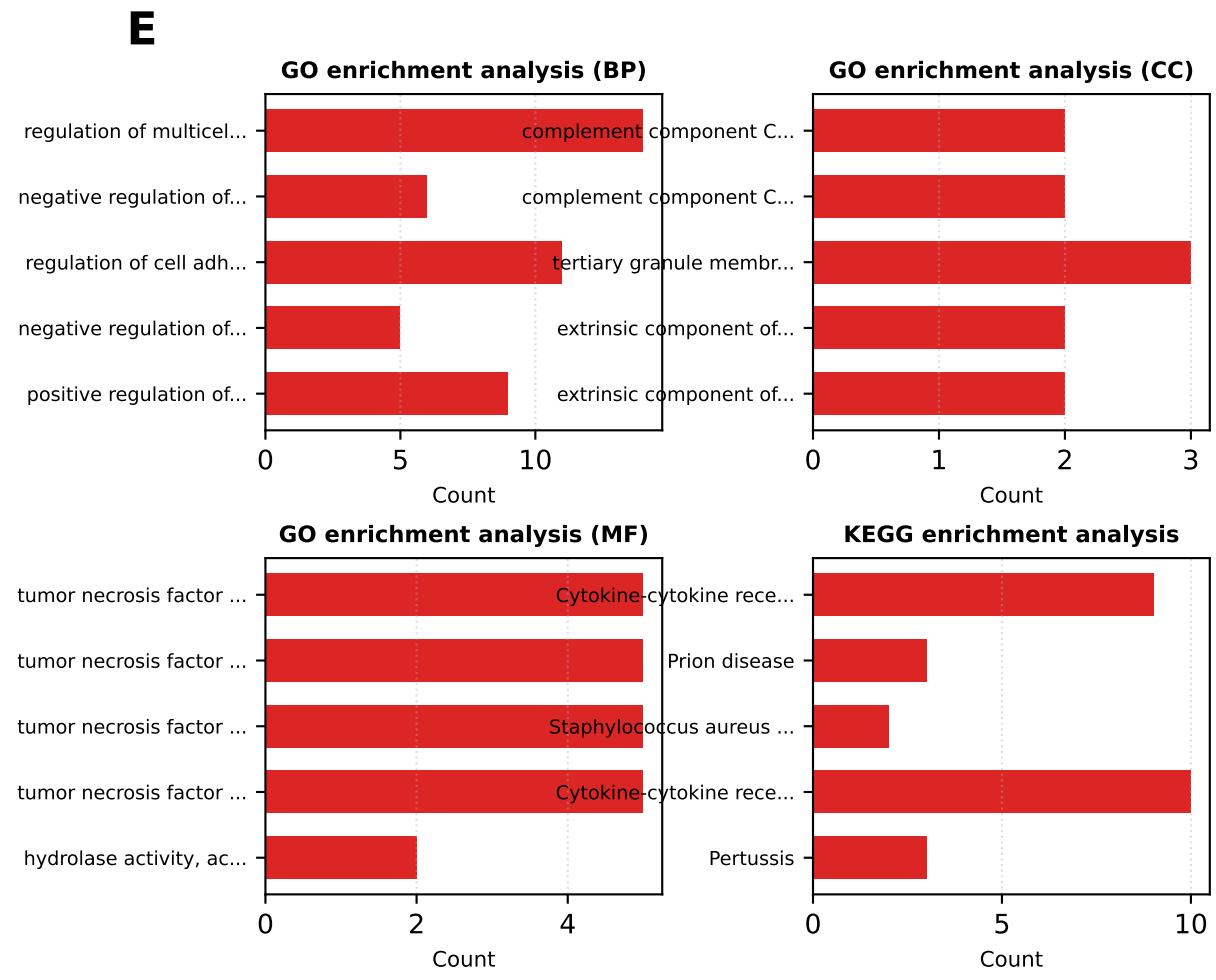

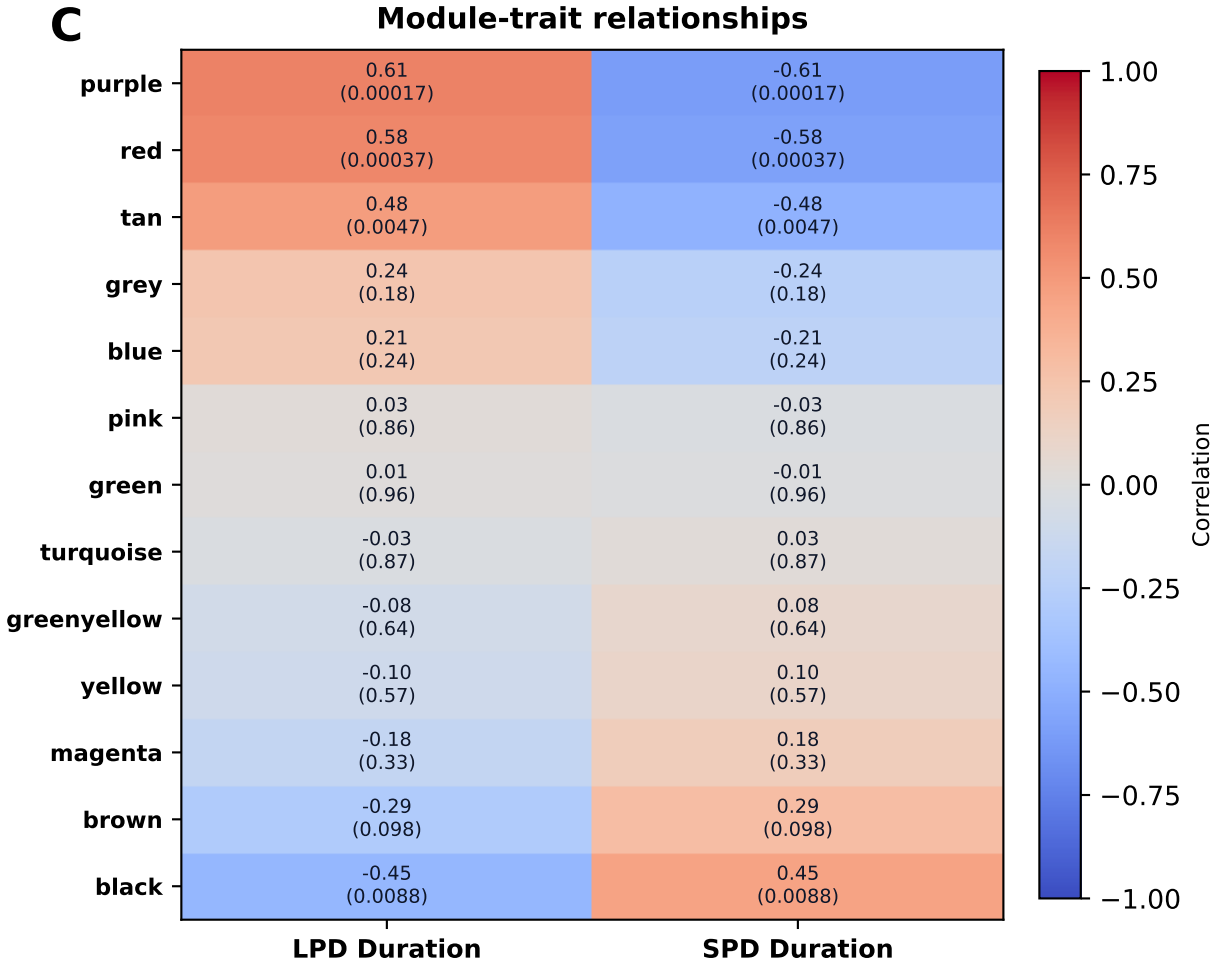

Fig. 3. Screening of matrisome-related genes in peritoneal dialysis effluent. (A) Selection of soft-threshold power and mean connectivity by WGCNA. (B) Gene dendrogram and co-expression module division by dynamic tree cut. (C) Module-trait relationships with PD duration. (D) Venn diagram of matrisome-related genes intersecting DEGs, WGCNA non-grey modules, and Naba matrisome. (E) Functional enrichment analysis (GO BP, CC, MF, and KEGG). (F) STRING protein-protein interaction (PPI) network of 44 matrisome-related DEGs.
