

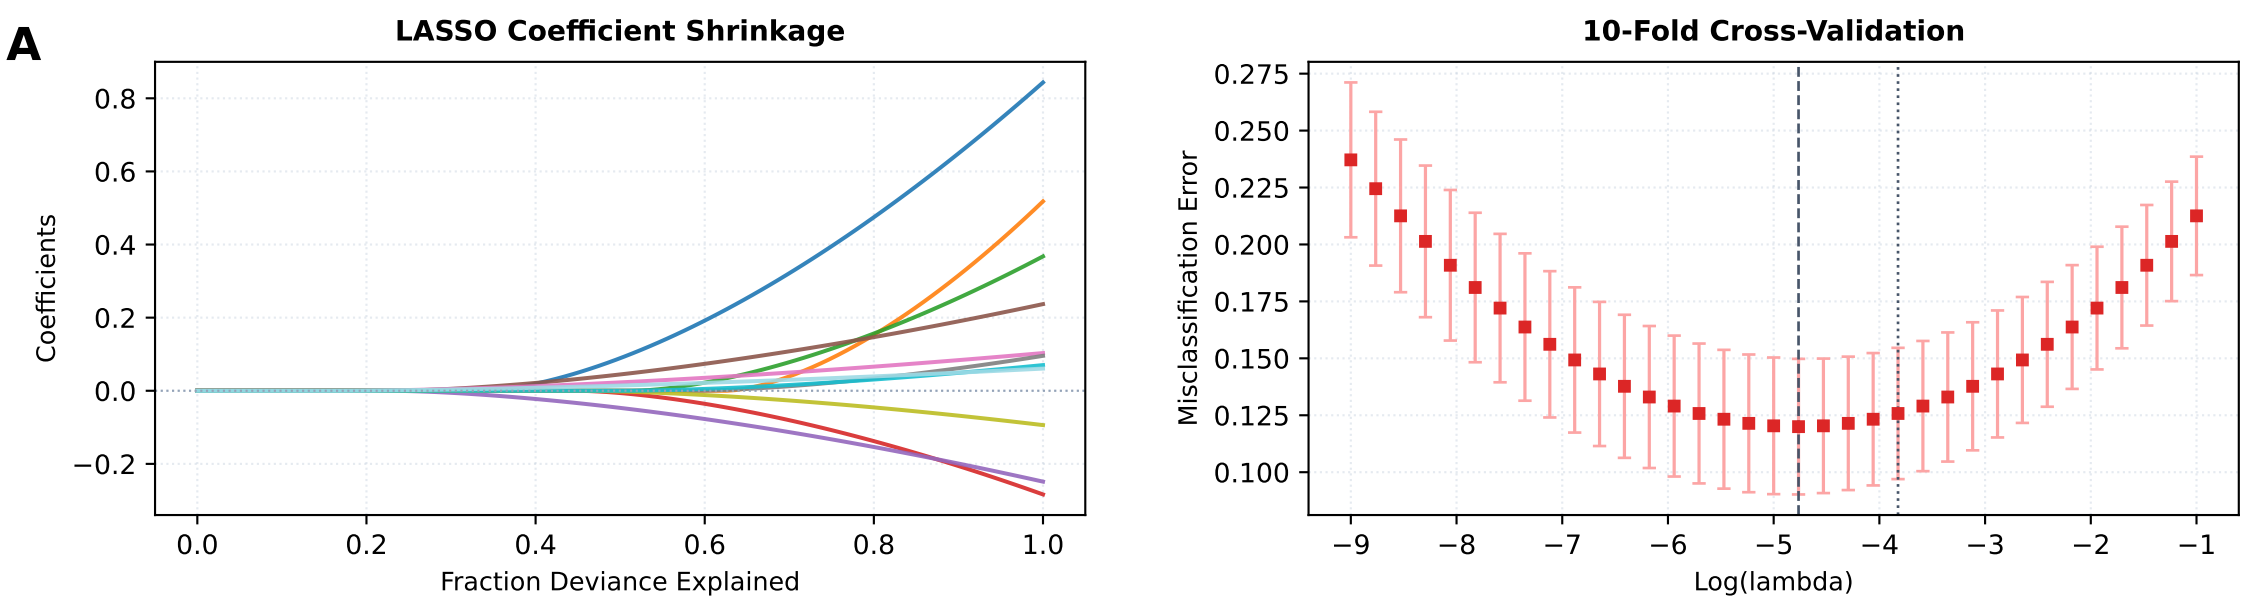

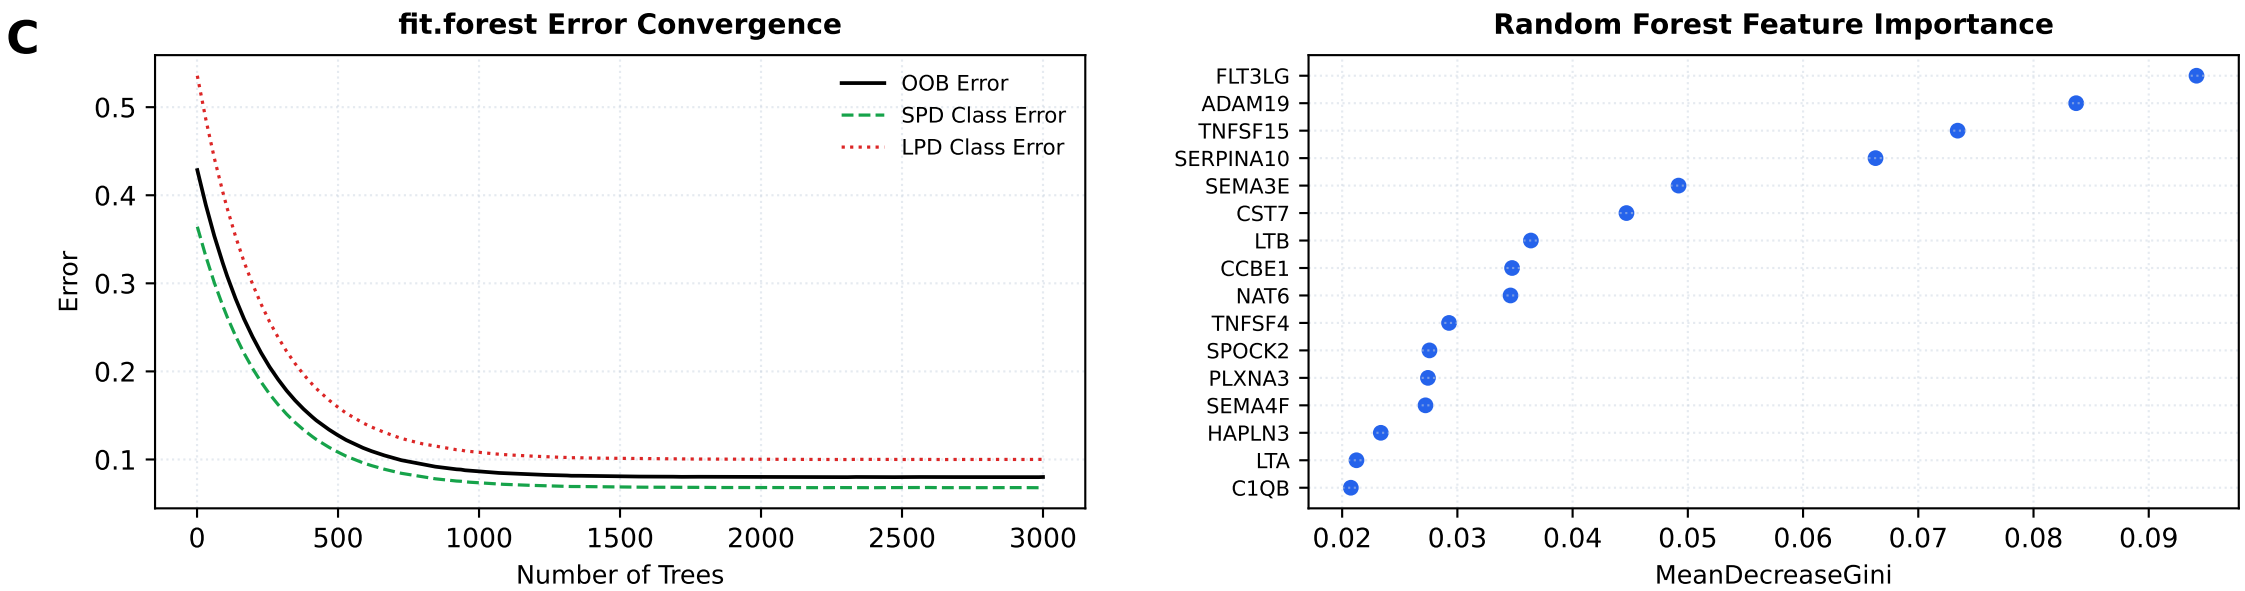

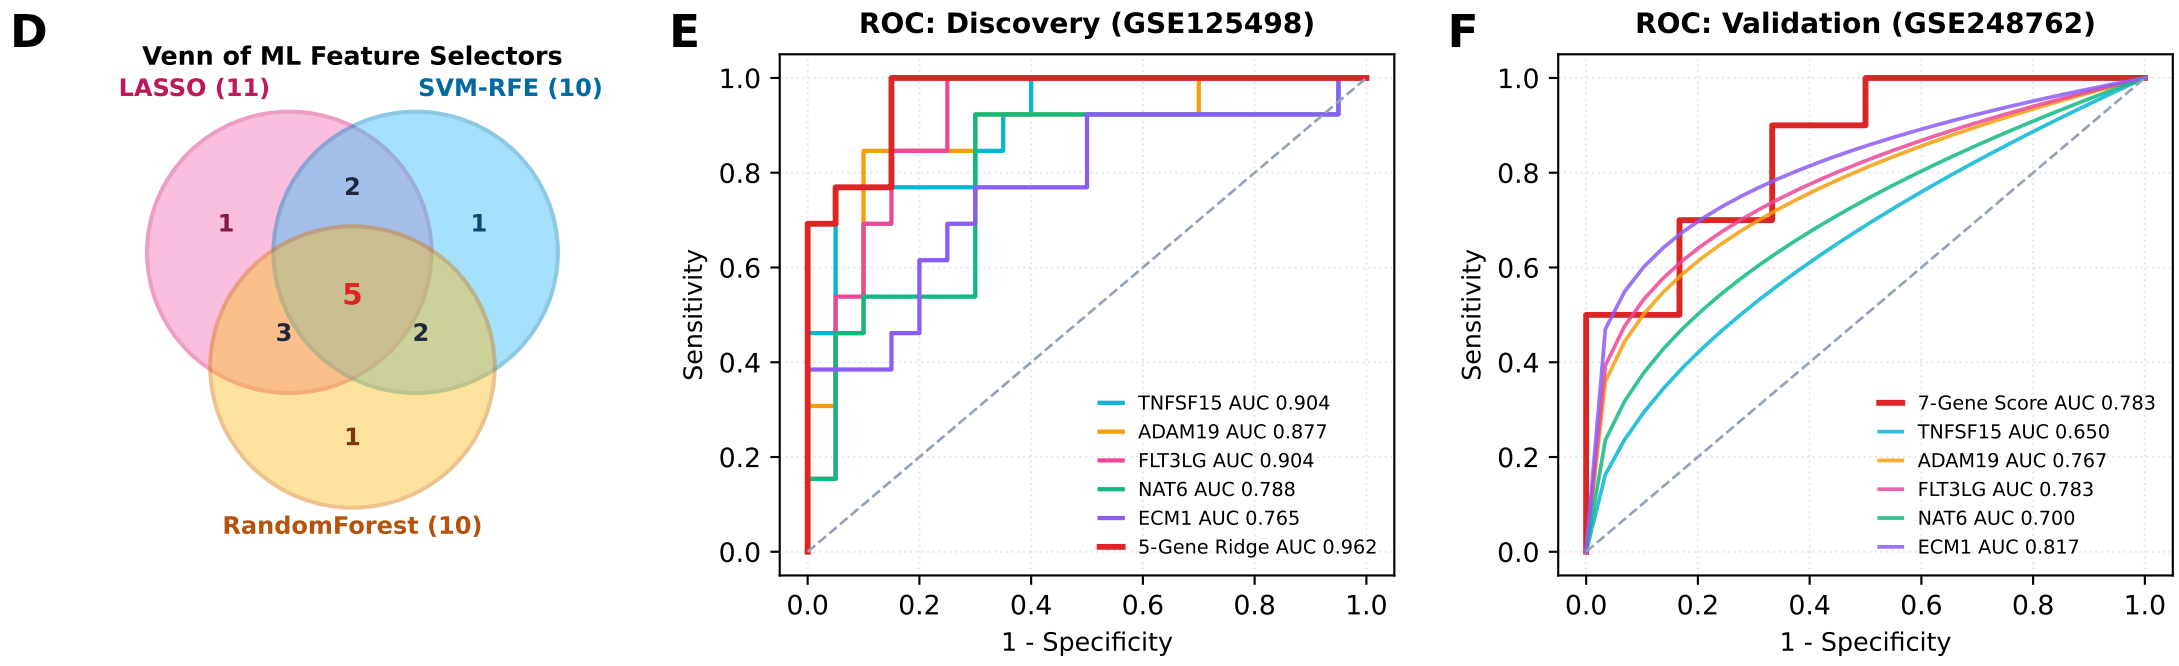

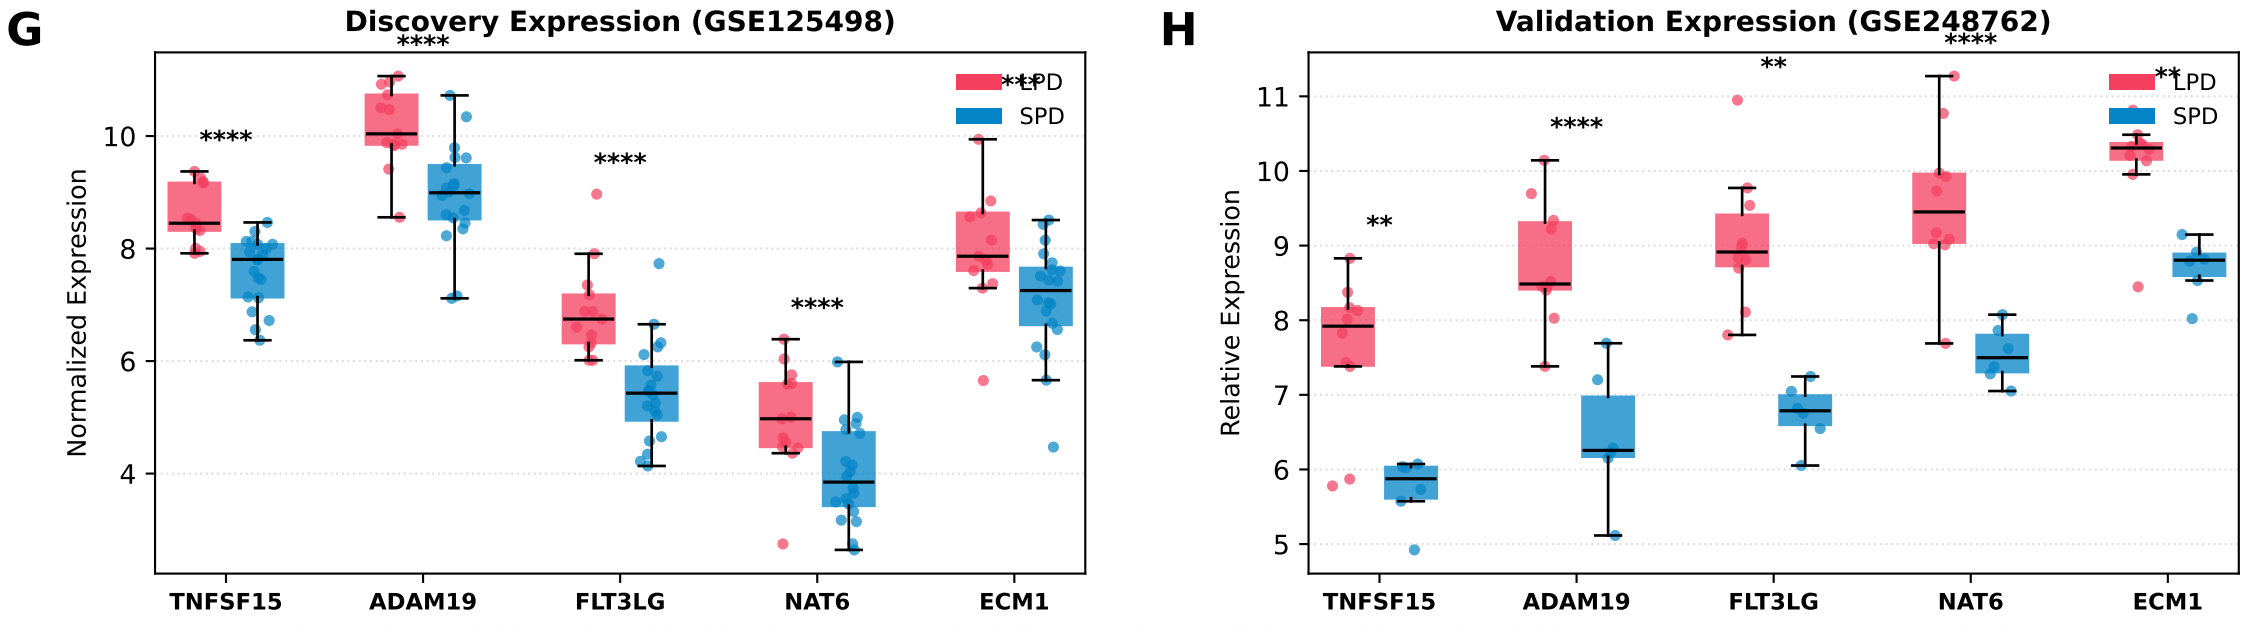

Fig. 4. Diagnostic biomarkers identification. (A) LASSO logistic regression coefficient profiles and 10-fold CV error curve. (B) SVM-RFE 10-fold CV accuracy and error curves vs number of features. (C) Random forest out-of-bag error and MeanDecreaseGini importance. (D) Venn diagram of diagnostic genes identified by the three algorithms. ROC curves of 5 diagnostic genes and the composite model in training (E) and verification (F) cohorts. Expression levels of diagnostic genes in training (G) and verification (H) datasets. **p < 0.01, ****p < 0.0001.
