

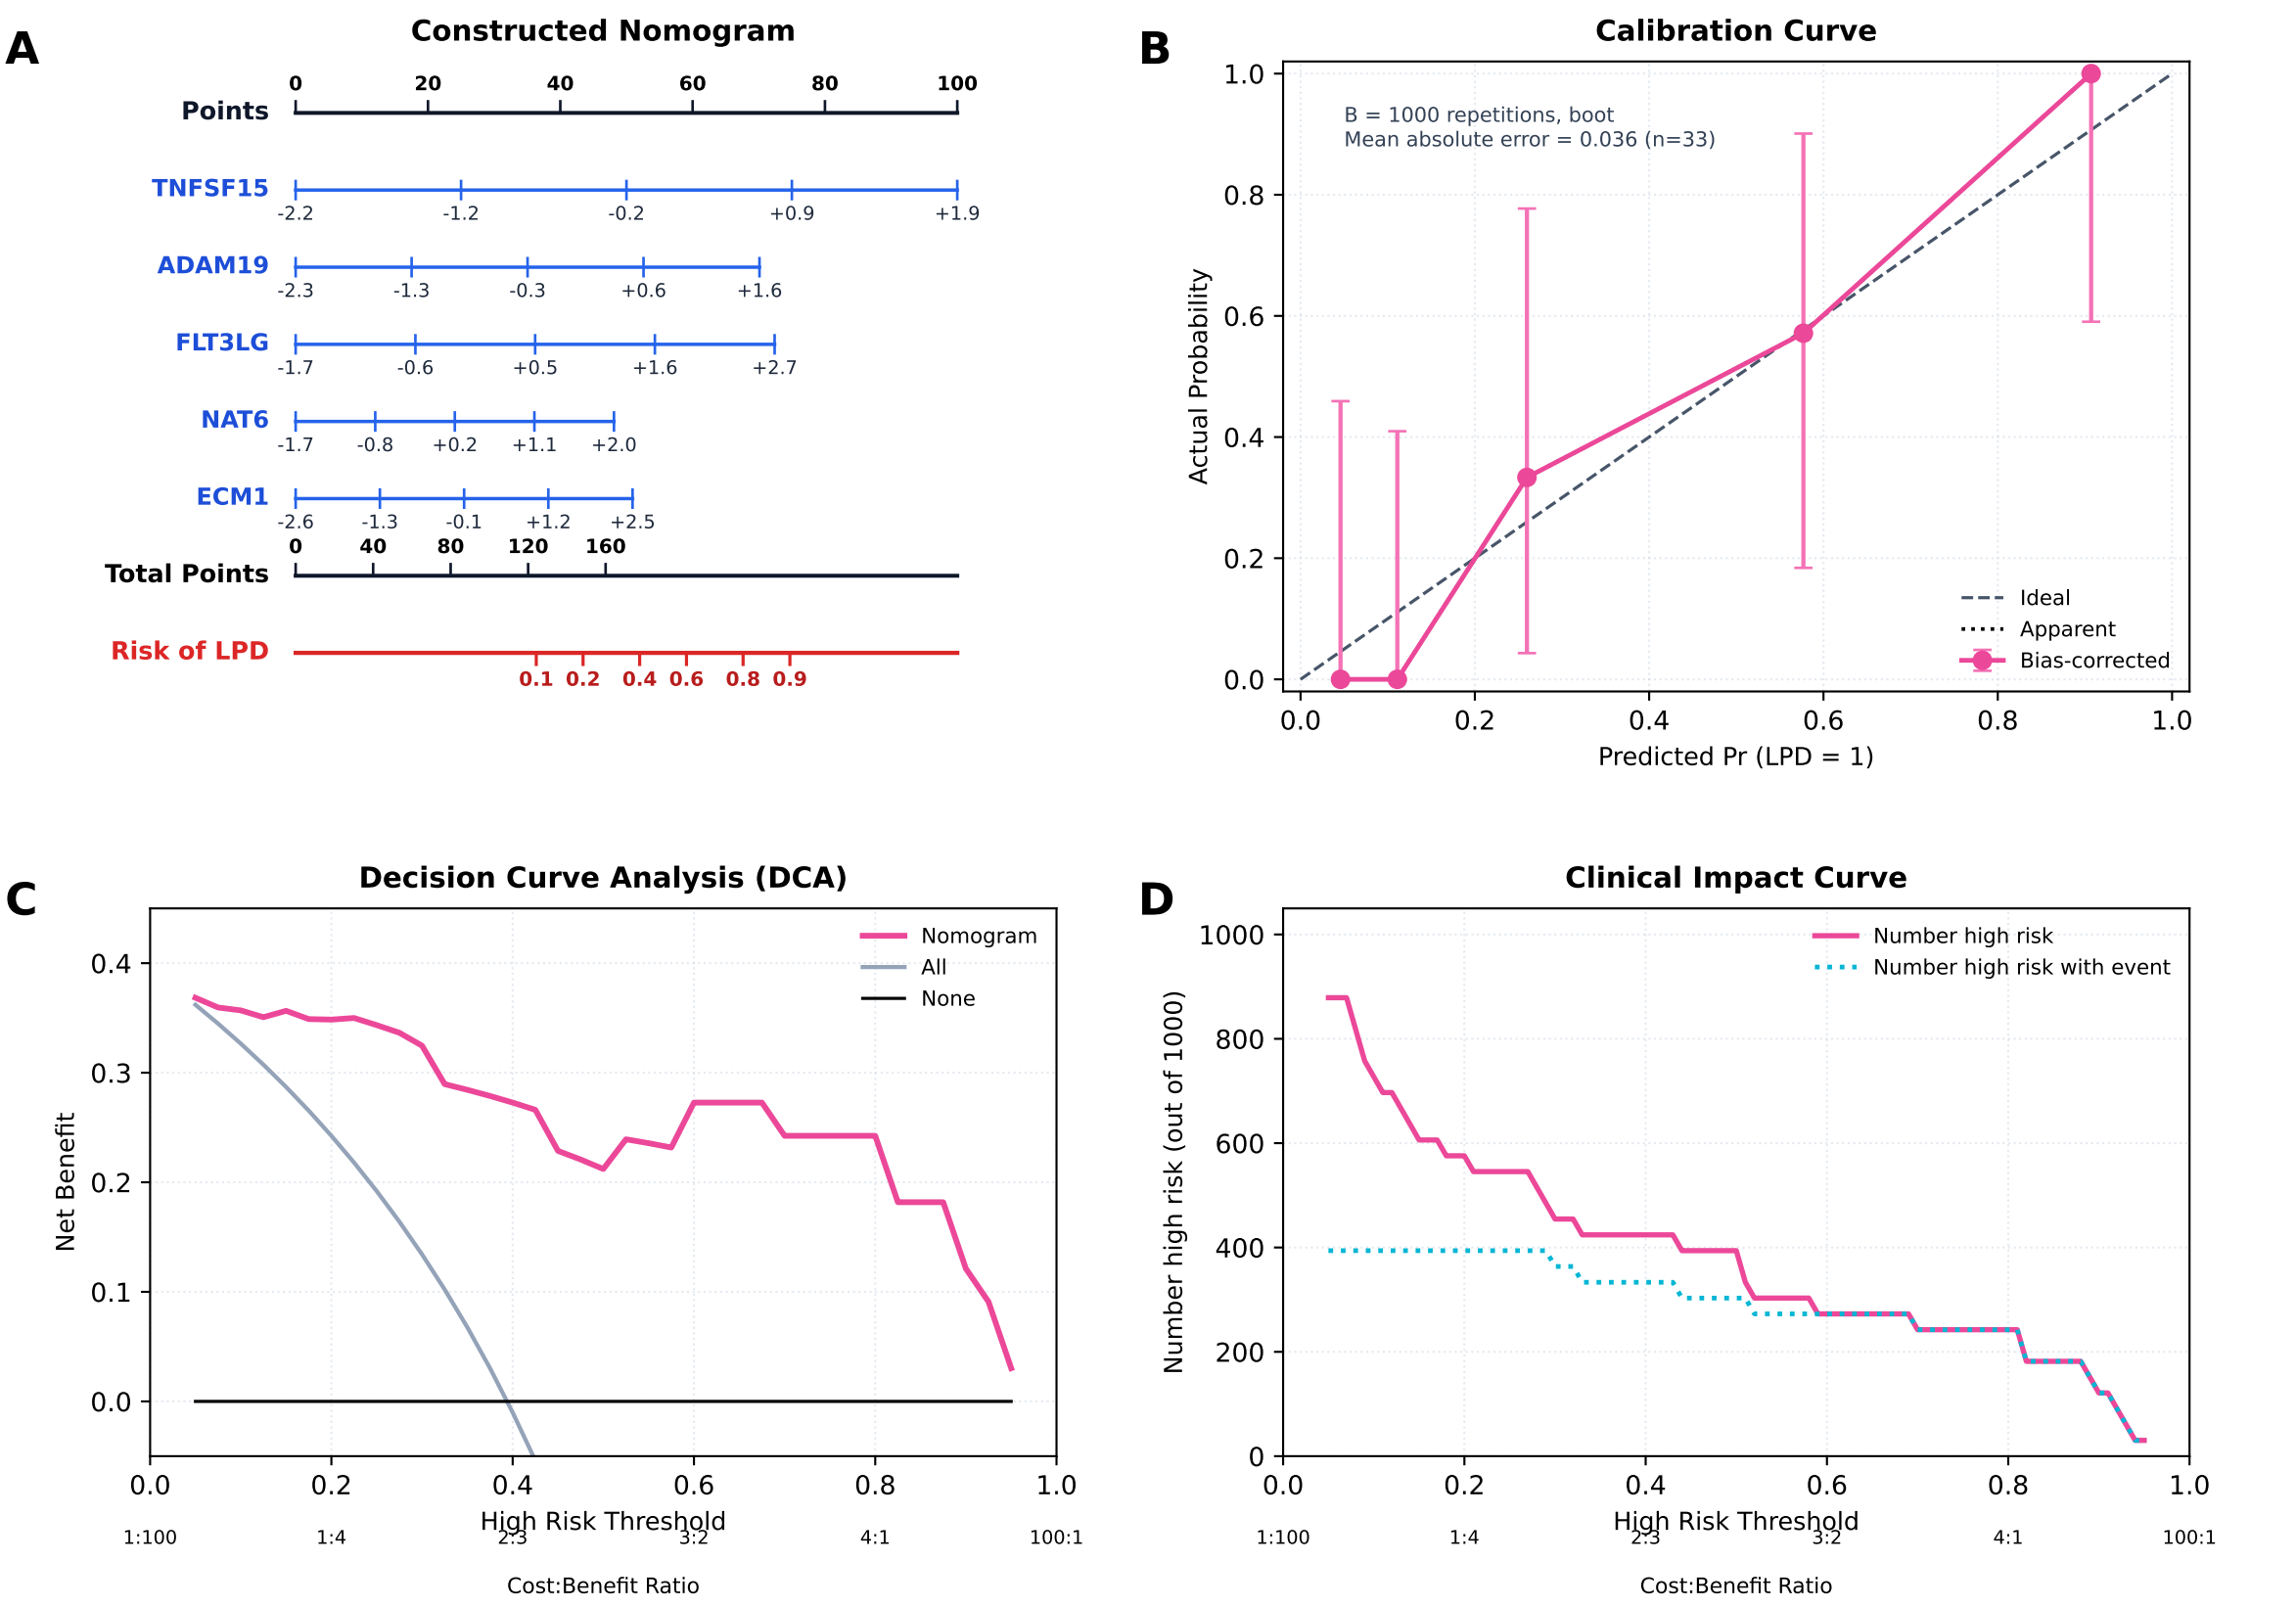

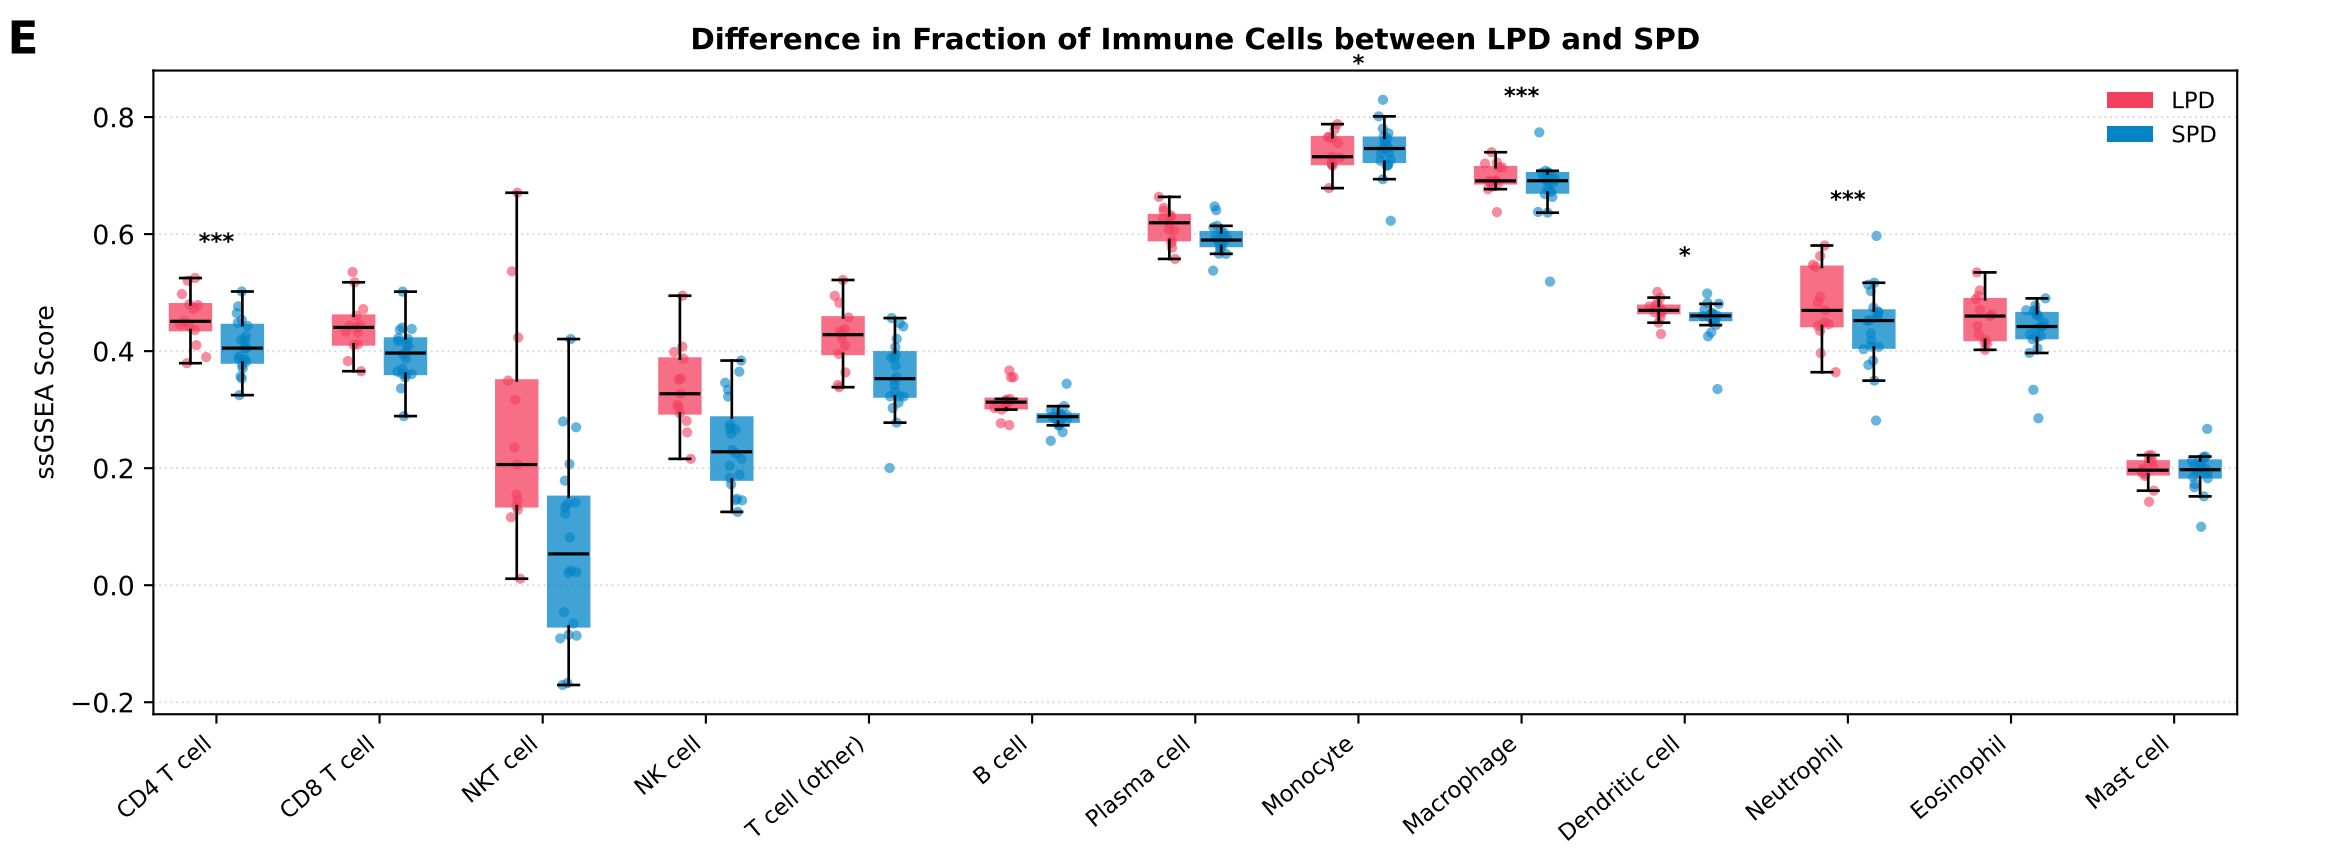

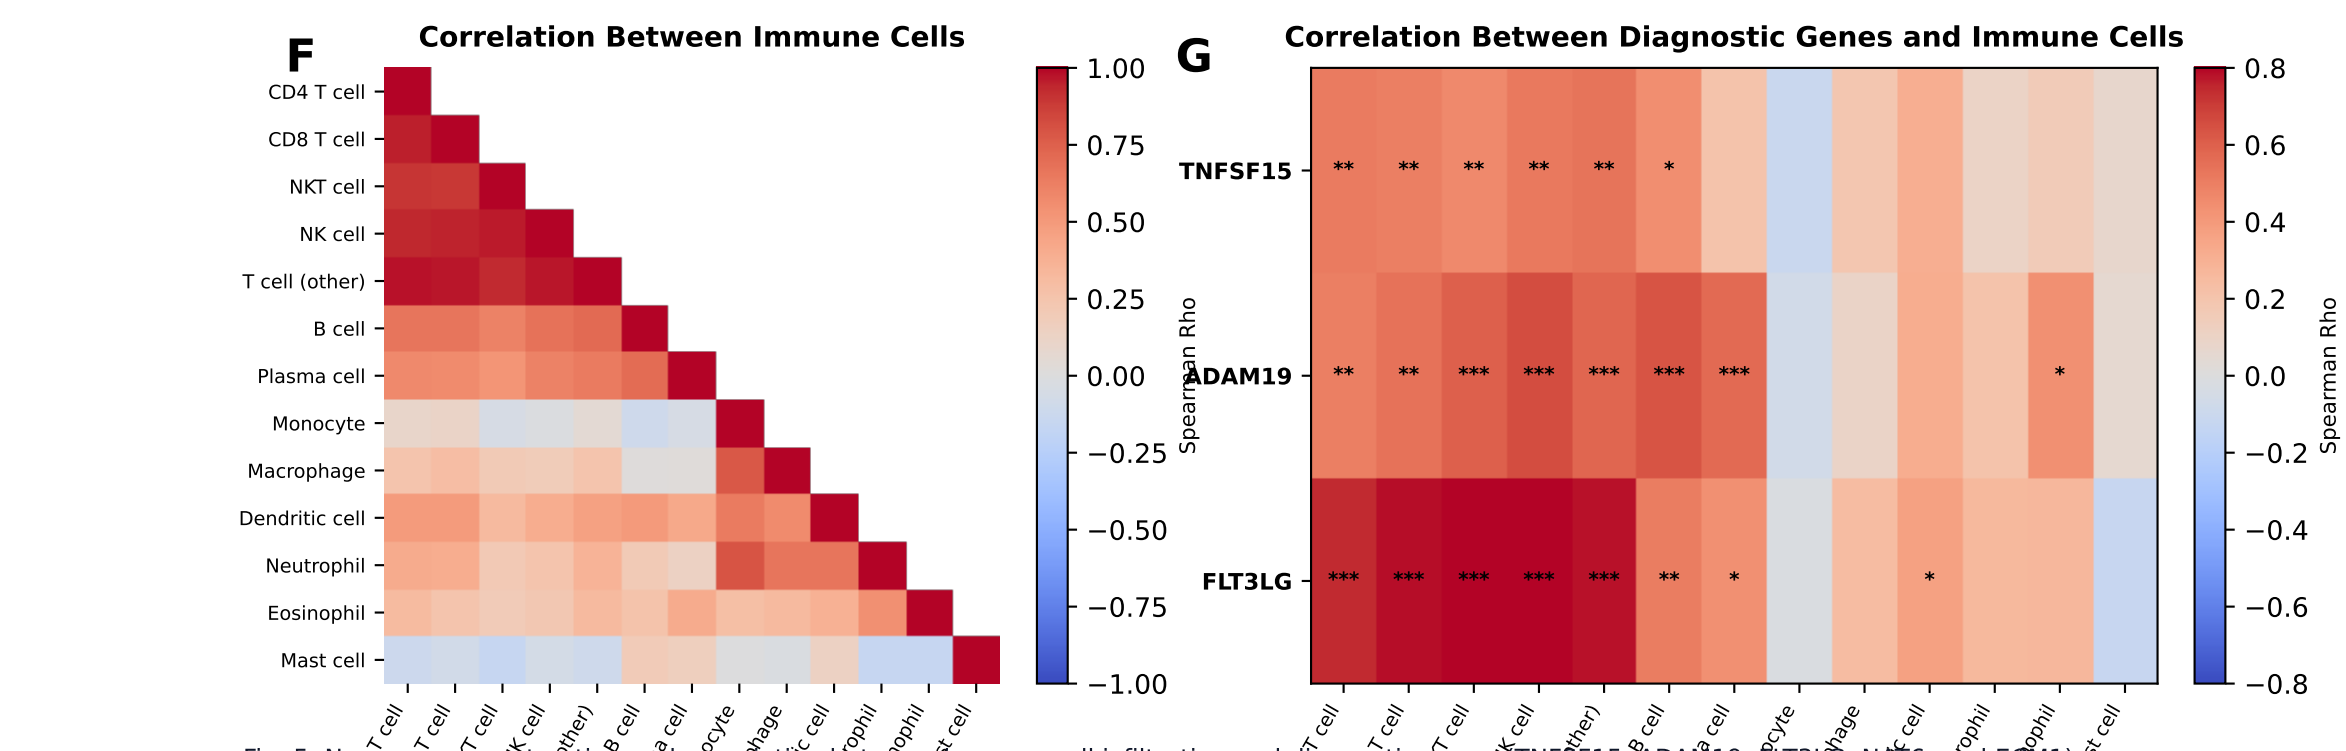

Fig. 5. Nomogram construction and association between immune cell infiltration and diagnostic genes (TNFSF15, ADAM19, FLT3LG, NAT6, and ECM1). (A) Constructed nomogram point display. (B) Calibration curve with bootstrap bias correction. (C) DCA curve evaluating clinical net benefit. (D) Clinical impact curve. (E) ssGSEA immune cell fraction differences between LPD and SPD. (F) Correlation matrix between immune cell types. (G) Correlation between the 5 diagnostic genes and immune cells. *p < 0.05, **p < 0.01, ***p < 0.001.
