

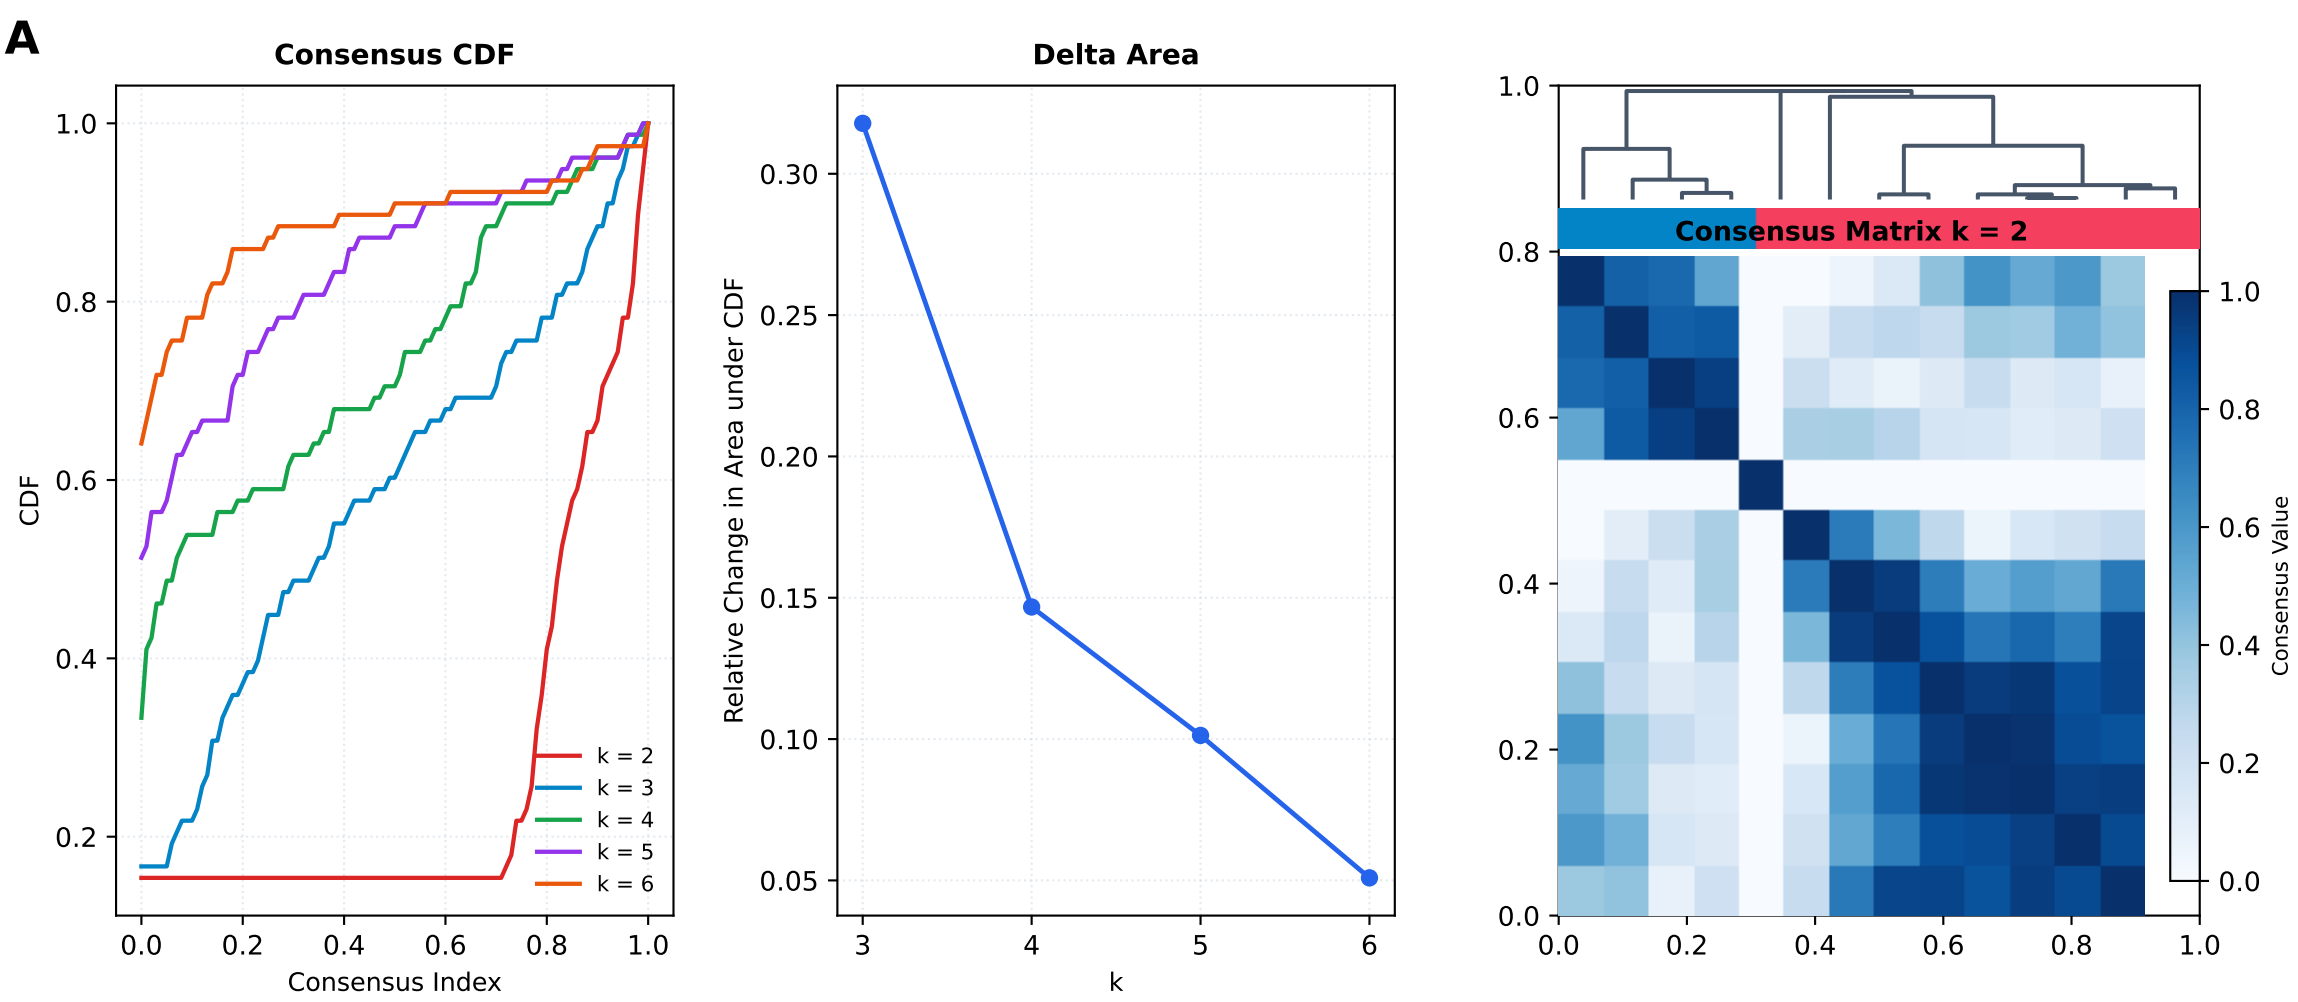

Fig. 7. Identifying LPD-associated molecular subtypes. (A) LPD patients grouped into two clusters according to consensus clustering matrix (k = 2), along with CDF and delta area curves. (B) Proportion of ambiguous clustering (PAC) and PCA of LPD subtypes. (C) Expression levels of diagnostic genes in C1 vs C2 subtypes. (D) Difference in relative immune cell fractions between C1 and C2 subtypes. *p < 0.05, **p < 0.01, ***p < 0.001.
