

A. Effluent Leukocyte Marker Expression (GSE125498)
SPD (n=20) vs. LPD (n=13)

B. Hub Gene Expression Discordance: Tissue vs. Effluent
Parietal Biopsy (EPS vs. Ctrl) vs. Effluent Cells (LPD vs. SPD)

C. VCAN Covariate Fragility & Leave-One-Out Analysis (Set B)
Attenuation depends on CD14 and FCGR3B together

D. Biological Coupling: VCAN vs. CD14 in Cellular Effluent
VCAN expression reflects shed monocyte abundance
